

Caddy

Developed by Vitra in Switzerland
Design: **Christoph Ingenhoven**

Aircraft trolleys were the source of inspiration for Christoph Ingenhoven when designing Caddy, a piece of mobile storage furniture offering the following benefits: It's flexible, robust, practical and durable. Its discreet appearance reveals countless options when it comes to internal design. The basic configurations, Caddy 1, Caddy 2, Media Caddy and Catering Caddy, cover a whole range of needs, making Caddy a flexible piece of storage furniture that takes up very little space. It also has electrical connection points meaning that it can be used as a mobile stand-up workstation, for conferences and presentations requiring beamers, or customised for specific catering needs.

Thanks to its discreet design, Caddy can be easily integrated into a whole range of environments. The four models, Caddy 1, Caddy 2, Media Caddy and Catering Caddy, can also be customised again at a later stage.

Innovative down to the last detail

Caddy has a number of functional details including a clever magnetic door mechanism, a utensil drawer made of integral foam, an extendable coat hook, or flexible sheet steel dividers to subdivide the drawers, which have a soft closing action.

Solutions for various applications: Caddy is also suitable for catering purposes.

Utensils can be easily organised thanks to the utensil drawer made of integral foam.

Practical point: The extendable coat hook.

Varied interior

A whole list of options is available in order to ensure that Caddy's interior meets a whole range of needs. These include shelves, drawers of various depths as well as a number of inserts and electrification and cable management options. Caddy can easily be modified at a later stage.

A multitude of uses

Caddy offers storage space to cover daily office needs, can serve as a mobile laptop workstation thanks to its electrical connection options, which also mean that a data projector, coffee machine or other similar item of electrical equipment can be used.

Practical and within easy reach: Caddy's electrification solutions (Media Caddy).

There are also a number of well thought-out electrification solutions inside (Media and Catering Caddy).

Patch panel for a whole range of purposes (Media Caddy) and the power cable retraction function (Media and Catering Caddy) make it easier to work with Caddy.

Christoph Ingenhoven

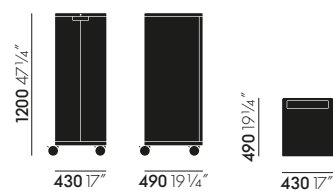

*1960, Germany

Architect and designer Christoph Ingenhoven lives in Düsseldorf, where he works from the office he founded in 1985. Together with Vitra he has developed a number of products for office space.
